

Simons Voss SmartIntego integration

SmartIntego Integration.

EXgarde's integration with Simons Voss SmartIntego offers a new level of remote lock functionality with a global leader in door opening solutions. Using SmartIntego alongside TDSi's core systems allows greater flexibility in remote areas where access control may be more difficult to implement.

Working together, the two solutions offer highly precise site activity reporting, centralised alarm management, real-time event and alarm updates, and evacuation reporting which is vital in the event of an emergency. The system also offers an attendance reporting solution that gives a highly accurate view of the overall access situation of any facility.

Key Features

No RS485 cable required

Can use existing cabling to connect to the IP hub.

Reduced installation time and cost

Save time and money over a hard-wired system.

Flexible solution

Access control on the door and outside the frame.

Immediate reporting

Online and real time transactions when network is in operation.

Expansion Possibilities

Enables access control to be extended further across the site at a lower cost per door.

AperioTM devices are online readers

Card transactions can trigger other actions via EXgarde such as CCTV tagging, lights being turned off etc.

Bring down energy usage and CO₂ consumption

The readers are asleep until a card is presented and wakes it up, thereby engaging power.

Strong Reputation

Integration with high quality locking from the world leader in locking solutions.

Office Mode*

Set a door to remain unlocked to facilitate ease of access for visitors during specific meetings or events.

White List

Retains up to 250 users for offline access.

Remote Release

Disengage locks remotely via EXgarde.

Specification.
