

Integration Options

TDSi's EXgarde PRO software provides security integrators and facilities managers with a wide range of integration options that not only enhance the flexibility and security of the system, but also increase the efficiency of usage.

The latest version of EXgarde PRO is capable of full integration with most third party applications and can deliver a tailored solution for individual building areas, entire buildings and multiple site installations throughout the UK and the world.

We integrate with you

Third Party ODBC or Control Systems

TDSi offers a suite of software database integration tools, which ease administrative workloads and allow for simplified analysis of data patterns across sites.

Milestone Integration

The EXgarde/Milestone XProtect Access plugin allows EXgarde installations to integrate with the Milestone XProtect VMS product suite, allowing control and management of your estate.

SimonsVoss Integration

The SimonsVoss wireless door handle combines intelligent access control functionality with elegant, ergonomic design. Through utilising wireless hubs it can operate multiple handle sets.

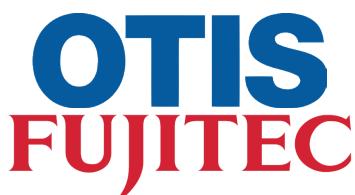

Aperio Integration

Aperio is the smart technology that enables a range of electronic locks to be wirelessly linked to a TDSi software platform.

Texecom Integration

Through using a true TCP/IP integration between the alarm panel and EXgarde, users can obtain a view of the alarm system and zone states from within the EXgarde Management software.

Lift Destination Control Partners

By incorporating TDSi software it can integrate a lift system into a Smart Building network. This produces a more environmentally friendly installation that is economical to run.

Microsoft Active Directory

Active Directory is a centralised and standardised system that automates network management of user data, security and distributed resources. It further enables interoperation with other directories.

VUgarde

VUgarde encompasses TDSi's range of CCTV surveillance products which provide complete IP surveillance - from entry level systems through to fully integrated high end solutions.

Thinking Software

Thinking Software's "Horizon-for-Access Control" Time & Attendance Module and Realtime integration using Microsoft SQL server, offers multi-user, multi-site planning for staff payroll.

BluePoint

BluePoint is a cloud-based Visitor Management solution hosted on a secure cloud platform. It offers access control integration with TDSi's EXgarde PRO for seamless management of visitors at multiple locations.

Who integrates with us

Hanwha Techwin

The integration between Hanwha and TDSi has been achieved via a transaction server module that is part of the Wisenet SSM VMS solution. The module links access control activity with related video footage captured by Wisenet cameras.

Synectics

This integration is available to all Synectics users that have standardised the use of the Synectics interface and utilise the access control features to access the estate.

iComply

This integration was driven by the needs of a world leading shopping mall developer for installations across the UK. Using their platform server, you can view and manage events, monitor users and integrate with around 100 OEM CCTV interfaces.

Other VMS/PSIM Partners

Driven by market and end user requirements, we are able to deliver seamless integration and improved operational efficiencies for end users. This includes those listed, who are part of the TDSi Partner Programme.
