

GARDiS - Access Management Software by TDSi

GARDiS is the new user friendly Access Control System developed by TDSi. It improves accessibility with easy installations and a user interface that has been developed specifically so any one can use it.

GARDiS has been developed as a result of feedback from customers who wanted a simple and straight forward platform to use, that required minimal training. The belief is that installers and users alike will be empowered to solve issues themselves, which they previously may have thought were too complicated.

Ease of Use

GARDiS has been developed with the installer in mind. The user interface has been designed to minimise confusion so anyone can install it and get going fast.

The navigation bar at the side of the screen helps you navigate to each separate section of GARDiS. Due to its minimalistic design and being a browser application, switching tabs is a smooth process with little or no load times.

GARDiS is supported by an intuitive help system that holds short video demos. These demonstrate how to perform tasks from a user's point of view, to minimise time spent contacting customer support.

Benefits

- Ease of use
- Easy to install
- Easy to maintain
- Easy to troubleshoot
- Promotes the installers work
- Reliable
- Cuts overall costs
- Requires minimal training
- Same level of security insight

GARDiS

Features

- Runs as a service
- Web based application
- Single installation
- Simple registration
- Designed with the user in mind
