GARDiS PC Specification

Minimum PC Specification for your TDSi GARDiS System

The following tables indicates the minimum PC Specification that should be used when setting up your GARDiS Access Control Software. If you have any questions or require any clarification please get in touch.

Architecture	Workstation or Server Grade
Operating System	64-bit[1]
Processors	64-bit (Intel Core i7 Gen 10 or above)
Virtual PC Environment	VMWare Sphere[2] - 8 Core, 16GB of RAM
RAM	16GB
Network Interface	100Mb - BaseT or above

[1] Windows 10 Pro (x64), Windows 11 Pro, Windows Server 2016 (x64), Windows Server 2019, Windows Server 2022

Windows Home is NOT Supported

[2] Please Note: It is not possible to operate some functions (for example USB Finger Pod Biometric Enrolment Devices) on Virtual machines as they require direct support drivers.

PLEASE NOTE: For Systems of 200 Doors or more please consult TDSi for appropriate specification
