GARDiS Software
Release Version 2.6

4420-3001

GARDiS Software Version 2.6

GARDiS Pro Software version 2.6 is packed with new features and enhancements along with two new third party integrations. 2.6 now integrates with Hanwha Vision's Widenet Wave CCTV platform bringing a host of CCTV and VMS features to GARDiS from the Hanwha Vision platform. The latest GARDiS release also now integrates with Calms Visitor Management Platform for a seamless Visitor Management, Registration, Verification and a whole host of other features from the Calms platform.

Hanwha Vision Widenet Wave Integration (4420-3073)

Features full bidirectional integration with Hanwha Vision Software, the Integration enables the the import of cameras from the server, visual verification, live view and event bookmarking along with a host of additional features.

Calms Visitor Management Integration (4420-3066)

The Calms Visitor Management Integration with the GARDiS Access Control Platform allows seamless integration of visitor credentials within the GARDiS System, allowing for the addition and monitoring of visitors and their locations created within the Calms platform within GARDiS.

At a Glance

Hanwha Vision Integration (4420-3073)

- Import Cameras from Server
- Live View within GARDiS
- Event Bookmarking
- Live View with Site Plan
- Video Verification
- Playback of Recorded Video

Calms Visitor Management Integration (4420-3066)

- End to end visitor management
- Streamlined online Check-In process
- Automatically informs hosts of visitor attendance
- Real-time monitoring and reporting of visitor traffic
- Enhances site safety and record keeping

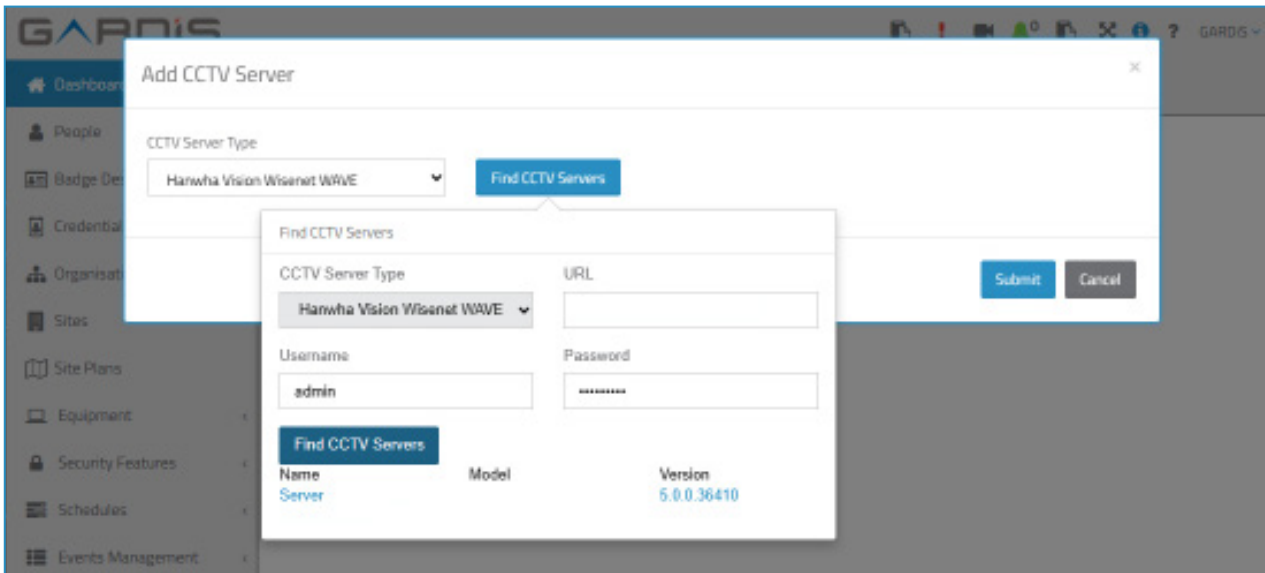

Additional New Features

- Video Verification
- Video Recording Playback
- Additional Suprema Reader Interface Configuration Options (Reader Profiles)
- Enhanced Badge Design Options
- New Reports - Access Levels (Doors), Access Levels (Who), ACU Command Failure, Occupancy Report
- Validity Dates displayed in Access Levels Tab
- Event Filter Improvements
- Better User Experience when loading archived events
- Automated Reports can be set to CSV format
- Automated Reports Update
- Visual Verification allows for multiple doors

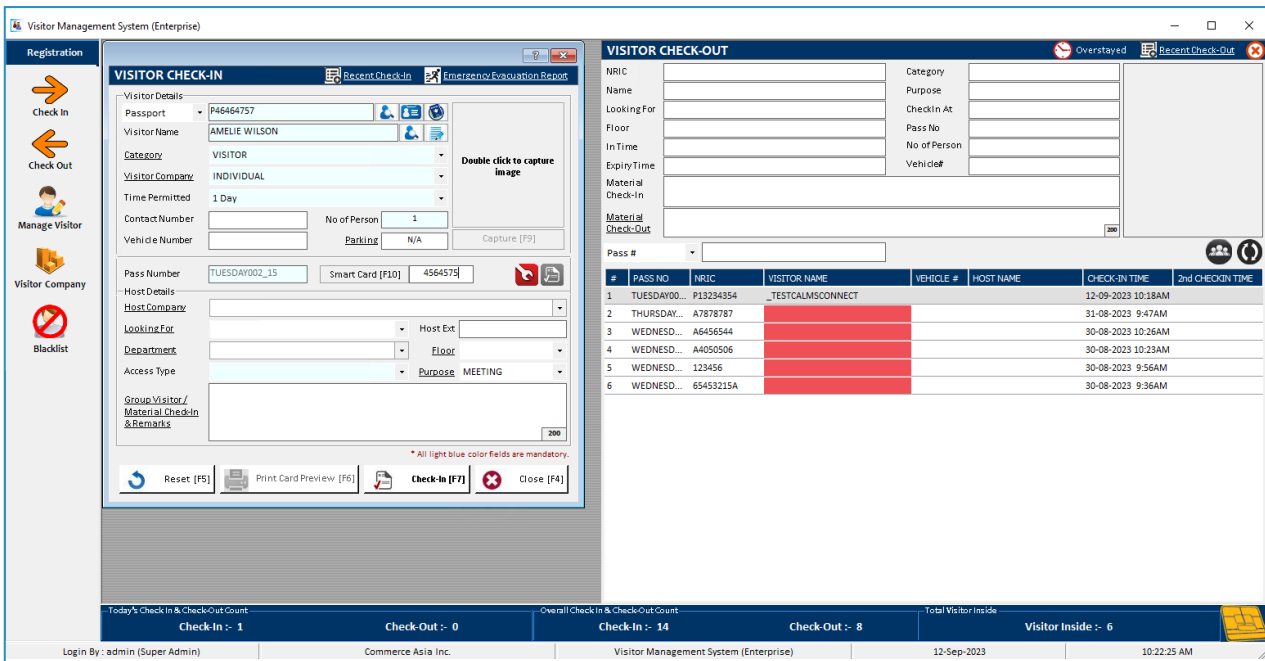

About TDSi

Robust and reliable Access Control Systems manufactured by world-renowned security specialists TDSi for the last 40 years.

Protecting and securing your building, assets, and people is a high priority for any business. However, those responsible for building security often find themselves overwhelmed by choice. TDSi is a specialist in access control, offering a range of superior products that not only answer the security challenges of the 21st century but delivers peace of mind to those who trust in our expertise and experience.

Hanwha Vision Widenet Wave Integration - Adding a Hanwha Vision CCTV Server within the GARDiS Software.

Issuing a Visitor Pass using the Calms Visitor Management Integration

Product Code	Name	Description

GARDiS Software Version 2.6 New Feature Glossary

Video Verification

A camera can now be associated with an Event Alarm within Event Management configuration screen in GARDiS Pro Software. Once configured, when event or alarm is triggered, the video feed from the associated camera is bookmarked and played in a pop-up within the software to allow for immediate identification and verification of the event.

Video Recording Playback

It is now possible to play back recorded content within the GARDiS Software System. Video can be selected by choosing a specific date and time on camera or by searching recorded events from a list (if Events have been associated with the camera in question).

Additional Suprema Reader Interface Configuration Options (Reader Profiles)

We've updated the Suprema Reader interface configuration options to provide additional parameters which make it much easier to define Biometric reader types with the GARDiS System.

Badge Design - Snap to Grid

New Snap to Grid functionality within the Badge Designer platform allows for easy alignment of image and text items when designing a badge.

Badge Design - Fill Background with Image

When adding an image to the background of a Badge it is now possible to scale the chosen background image to fit the entire background of the card with the click of a button.

New Reports

- **Access Levels (Doors)**
Generates an Access Level to Door relationship report detailing which doors within a system require which access level. Provides a quick and easy way of verifying the access levels associated with each door on a system which is great for auditing processes.
- **Access Levels (Who)**
Which people have access to each access level
- **ACU Command Failure**
Especially useful for Installers and maintenance/troubleshooting – makes it easier to identify issues by showing which command failures have occurred. This can be filtered by specific ACU's or ACU's over a whole Site. For example, can be used to troubleshoot access through door issues as an event-based search but gives contexts such as ACU offline or Command timeout within the event log if such an Event has been associated with the ACU.
- **Occupancy Report**
Will provide a report of people within an area, total people within area and as quick look. Configurable to provide details of people within the Whole Site, Number of people On site, Area Occupancy and Total Occupancy

Validity Dates displayed in Access Levels Tab

Display validity dates within the Access Levels tab to show a start and end date for when individuals have access to certain levels (indefinitely, date period)

Event Filter Improvements

- **Failed Events Filter**
Show only failed events (ACU refresh, user credential issue – anything to do with failed ACU interactions with an ACU)
- **Alarmed Events**
Show only events defined as alarm events.

Better User Experience when loading archived events

An improved user interface to highlight that a request is processing within the software via on screen prompt.

Automated Reports can be set to CSV format

Previously only available as a PDF – now also available in CSV format which can be used to integrate with other systems.

Automated Reports Update

Automated Reports will now generate a report and email even if there is no data to report. Previously the report didn't use to send if there was no data. The Report can be requested in either PDF or CSV format.

Visual Verification allows for multiple doors

It is now possible to choose a list of doors to associate with Visual Verification. Once configured, images from credentials will pop up for all selected doors within the Dashboard. This feature was previously only available for one selected door at a time.

NEW Integrations

Hanwha Vision Widenet Wave Integration (4420-3073)

- Import Cameras from Server.
- Live View within GARDiS.
- Event Bookmarking.
- Live View with Site Plan.
